

Manual Microcement maintenance kit

At betonlook.nl, we offer a unique Microcement maintenance set. This set includes a cleaning agent and a maintenance wax, allowing you to care for your Microcement coating properly. By using this set, you provide the coating with the necessary nourishment and protection for long-term preservation.

Microcement cleaner

Our Microcement cleaner is specially developed to thoroughly and safely clean surfaces covered with Microcement. This natural cleaning product does not contain aggressive preservatives, so you can clean your Microcement surfaces without damaging the top layer. A weekly cleaning with this product is ideal for maintaining your surface.

Instructions

Add just one capful of the cleaning agent to a bucket of lukewarm water for optimal use. This small amount is sufficient to achieve the desired effect.

Microcement maintenance wax

The Microcement coating protects your surface against dirt and moisture. Our maintenance wax provides the necessary nourishment and care to keep this protective layer in optimal condition. Applying the maintenance wax weekly helps maintain the durability of the protective layer.

Instructions

Use the exact dosage for the cleaning agent. Add one capful of maintenance wax to a bucket of lukewarm water. Since our maintenance wax is highly concentrated, one capful is more than enough. A high dosage may cause a dull haze on your Microcement.
